Standard

(previously Contemporary Fit)

Garment styles with this icon have a standard wearing ease and should feel comfortably loose around the chest, waist, and hip.

Athletic Fit or Fitted

Garments with this icon are fitted to flatter the contours of your body. An Athletic Fit garment will fit closer to the body's measure and have less wearing ease. The chest, waist and hip measures are slimmer than that of our Standard fit.

Relaxed

Garment styles with this icon have increased wearing ease and are roomier than our Standard fit. A Relaxed Fit garment will usually have a drop shoulder, a larger armhole and a more boxy shape. A Relaxed fit does not follow the contours of the body and is made for comfort.

Please use these size charts to determine the appropriate Zorrel garment size to order for all fits offered.

1. Neck

Measure neck circumference where the standard button type collar might be fastened.

2. Sleeve Length

Measure the distance from the prominent bone at center back neck, across the shoulder, over the bent elbow to the center of the wrist bone.

3. Bust/Chest

Measure the Chest circumference at the fullest point keeping the tape horizontal around the body.

4. Waist

Measure the waist circumference at the smallest part of the waist, often at or above the belly button, keeping the tape horizontal around the body.

5. Hip

Measure the hip circumference at the fullest part of the seat, keeping the tape horizontal around the body.

6. Inseam to Floor

Measure the distance from the groin point to the floor.

Snag and Pill Test Ratings

Look for the ratings to each of our fabrics.

ASTM D5362

Standard Test Method for Snagging Resistance of Fabrics, resulting in a rating of 1 to 5, 1 being poor & 5 being excellent

ASTM D4970

Standard Test Method for Pilling Resistance and Other Related Surface Changes of Textile Fabrics, resulting in a rating of 1 to 5, 1 being poor & 5 being excellent

MMT Ratings

"How good is your tech tee?"

Over the years as tech has become all the rage, that question has been asked without anyone's ability to answer it. Until now... Introducing Moisture Management Textiles (MMT) Ratings to identify level of performance and moisture management.

The American Association of Textile Chemists and Colorists, known as AATCC, is "internationally recognized for its standard methods of testing fibers and fabrics to measure and evaluate such performance characteristics as colorfastness, appearance, soil release, dimensional change, and water resistance." And now AATCC is further recognized for its evaluation of moisture management properties of fabrics.

The testing standard AATCC 195 is a test method for "Liquid Moisture Management Properties of Textile Fabrics", and "produces objective measurements of liquid moisture management properties of knitted" fabrics. The method is made up of several different tests and algebraic equations (the kinds we all forgot after high school.) However, in an effort to quantify the test into a meaningful indicator of a Moisture Management Textile, Zorrel has identified a MMT Ratings based upon two indicators from this test.

1) The fabric tested must result in the conclusion of either, "This is a Moisture Management Fabric" or "This is a Fast Absorbing & Quick Drying fabric."

AND

2) The result of the One Way Through (OWT) Index calculation must be a positive number, which then becomes the garment's MMT Rating.

For example, Zorrel's fabric of the Z3503 & Z6503 has a OWT Index Rating of 333 and thus receives a MMT300+ Rating on a scale of 1 (modest) to 1800 (exceptional).

So, look for that MMT Rating. When Zorrel indicates a MMT rating on our apparel, you can be assured that you are buying a tested and validated performance shirt.

Dri-Balance™

Our engineers have created elaborate knit structures which optimize the moisture transport dispersion in the cotton layer, allowing for air to move inward to cool the wearer. All Dri-Balance™ fabrics have two layers. Against your skin is 100% microfiber polyester, plaited to a 100% combed cotton surface. Moisture is moved from the skin to the cotton instantaneously keeping wearer dry and cool. The cotton rich fabric content is naturally Anti-Microbial forever.

Syntrel™

This Zorrel exclusive micro-fiber polyester technology is also a blend. Despite being 100% polyester, it uses two polyester yarns – a hydrophilic filament and a hydrophobic filament. This blend achieves a fabric which quickly moves perspiration from the wearers' skin to the outside and keeps the perspiration on the outside.

Tri-Reg™

Tri-Reg™ is another proprietary Zorrel fabric which incorporates 3 performances and features; Body Heat Regulation – keeping you cool when it's warm and warm when it's cool. In addition to the BHR, it provides wind blocking and moisture wicking capabilities. The uniqueness of Tri-Reg™ keeps you dry and comfortable in nearly all temperatures without over-heating.

Technicore™ Endurance

Zorrel's newest technical fabric is Technicore Endurance™. 100% polyester fabric utilizing advanced spinning and knitting techniques to give it the look and hand feel of fine cotton. No more damp shirt sticking against your skin. Technicore Endurance is cool dry comfort, and perfect for the hottest day. Technicore goes way beyond standard cotton by offering - UV Protection, Durable Moisture Management, Anti-Microbial, Superior Stability, & Pill Resistant.

SMARTBLENZ™
Intelligent Fabrics by Design

Zorrel® is known for inventing and producing advanced technical knit apparel. **Zorrel®** believes that you should expect more from your apparel. SmartBlenz™ fabrics are designed to deliver superior performance over regular fabrics. Therefore, SmartBlenz™ fabric are delivered through the proprietary ingredient technologies Dri-Balance™, Syntrel™, Tri-Reg™, and Technicore Endurance™. SmartBlenz™ fabrics feature:

- Cool Dry Comfort™ - Feel fresher, cooler and drier all day long
- Effortless Care - wash it, dry it and wear it – no ironing or special pressing required
- Travel Ready - ready to wear when you take it out of your bag
- Superior Stability - resists body twist and shrinkage after multiple launderings
- Enhanced Durability - long lasting appearance and highly pill resistance
- Anti-Microbial - prevents the development of odor through construction

Technicore

Fabrics are at the core of Zorrel's business. We are different from every other apparel distributor in the world because we develop all of our fabrics from the raw material forward. In Industry terms we are "vertical" – truly vertical. Combining our verticality with in house apparel designers and fabric engineers, places Zorrel in the unique position of being able to conceive fabrics and garments that deliver targeted solutions (technologies) to answer customer needs. Here are terms you will see next to each style, we have described specific attributes so you can better choose the right style and fabric to meet your needs. Knowing from where your apparel comes should be as important as price.
